

Terminal Works –Optional Printer Setup

Terminal Works is a set of programs that were installed on your computer during the installation of Azure Virtual Desktop. These programs enable your virtual computer to printer to your local printers.

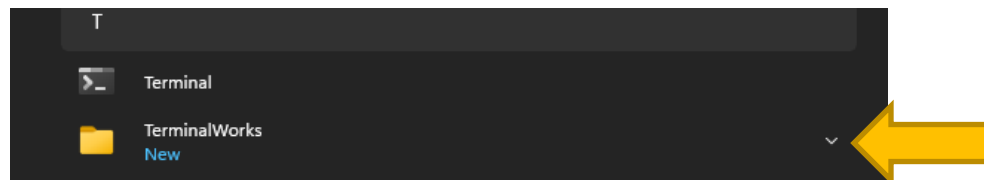

If you have more than one printer available on your local computer and want to be able to print to a printer that is different from your default printer, you need to update the Redirect options in the Terminal Works Option Program.

1. To access the TerminalWorks Option program, click on your Windows' Start icon: 

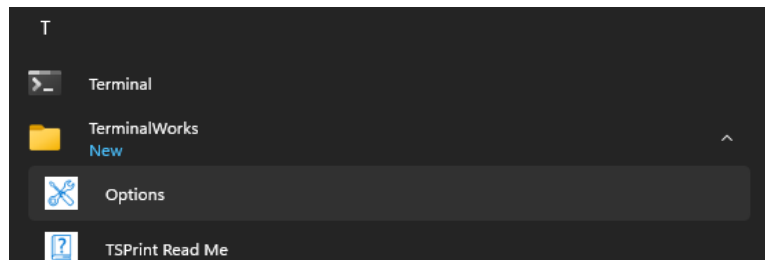

2. Then, click on: **All apps >**

3. Scroll through the list of apps until you see **TerminalWorks** then click on the down arrow:

4. Click on: **Options**

5. In the TSPrint Client Options program:

- On the General tab**, verify your default printer setting. Choose a different default printer as necessary.
- On the Redirection tab**, checkmark any other printers that you want to add to your list of available printers.
